

Security Incident Management

The PagerDuty Operations Cloud leverages the power of AI and automation to respond to, automate and remediate security incidents, ensuring cyber resiliency.

Contain security threats

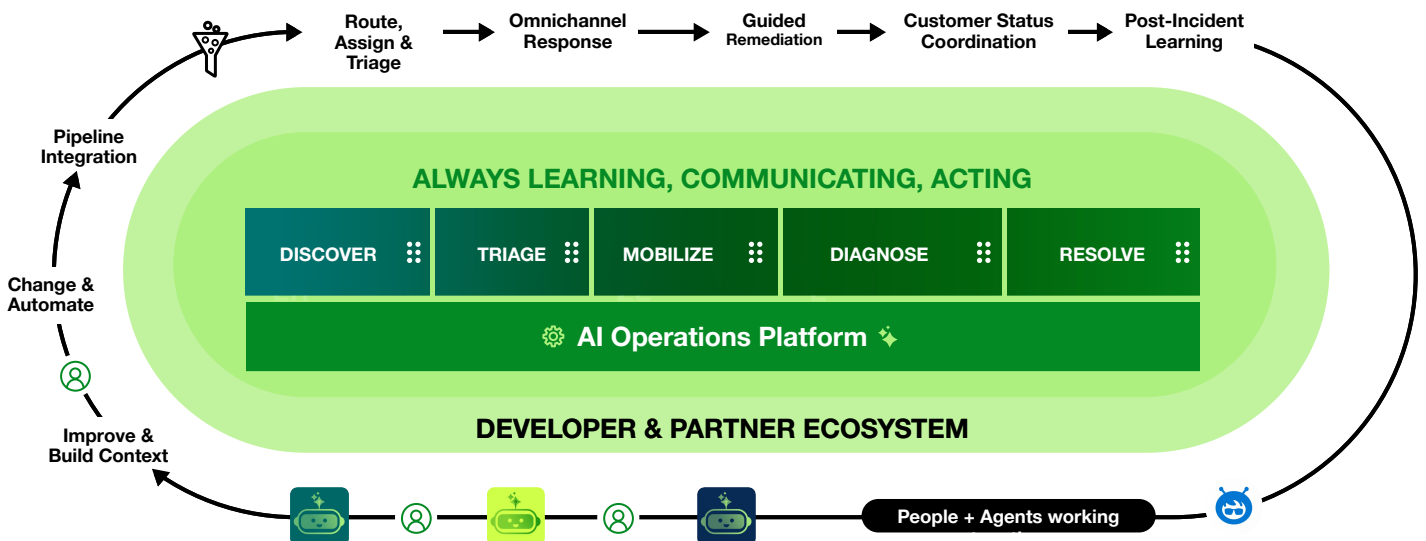

As businesses strive for operational excellence at scale, they are experiencing higher levels of cybersecurity risk and a growing number of security attacks. Cyberattacks can harm businesses operations, diminish brand reputation, and decrease revenue. A robust security strategy with real-time operations is essential to contain security threats quickly.

A modern security incident management solution should be able to:

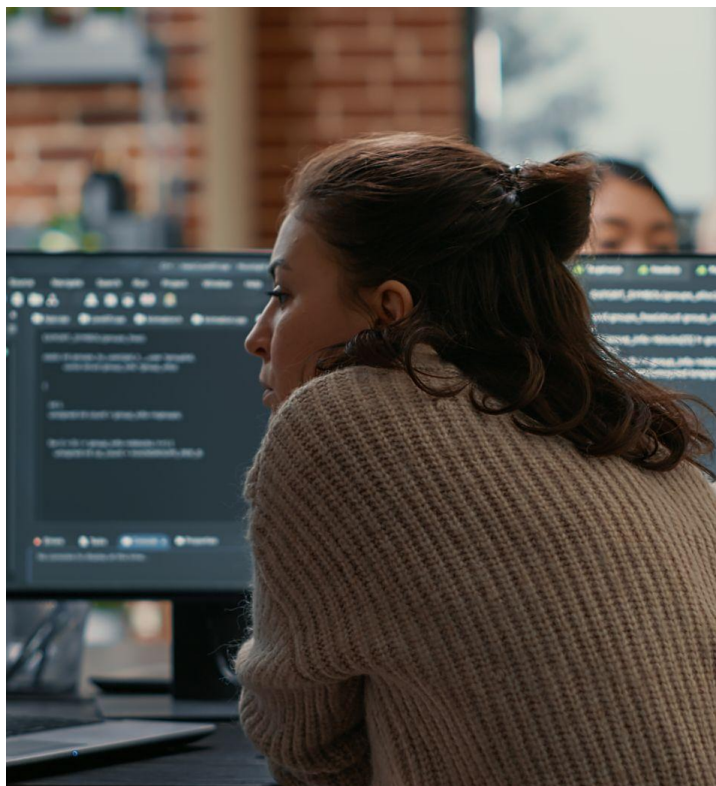

Automate the entire security incident response lifecycle with PagerDuty

The PagerDuty Operations Cloud for Security Incident Management empowers organizations to improve incident response times, contain attacks faster, and enhance security processes. PagerDuty's Security Incident Management solution leverages AI and automation to reinforce security best practices from detection, mobilization, and escalations to resolution and learning. Providing event-driven automated workflows and guided remediation, PagerDuty ensures there is clear communication and action every step of the way.

Use one platform to respond to, automate, and remediate security incidents

Streamline workflows

Manage the end-to-end security incident lifecycle with the PagerDuty Operations Cloud platform. Minimize business disruptions with automation and coordinate collaboration between security and developer teams on a shared platform to ensure a smooth and effective response.

Automate security best practices

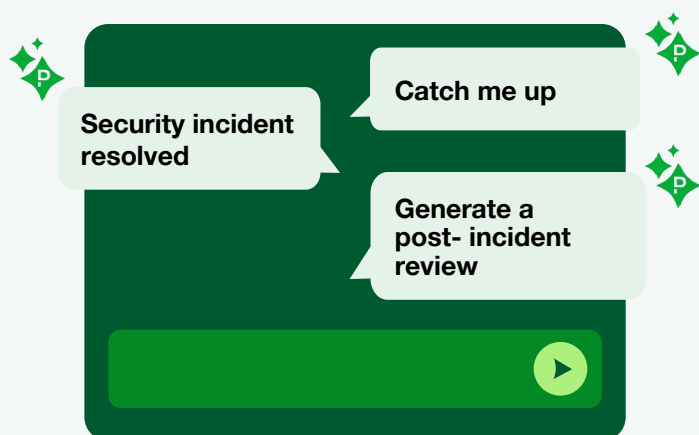

Streamline critical operations with PagerDuty's powerful automation capabilities, ensuring seamless coordination across teams and technologies. Use guided remediation to mitigate risks and ensure all essential steps are followed.

Remediate and improve

Transform security incident response with automatically drafted post-incident reviews. Convert learnings from insights into intelligent automations, turning challenges into opportunities for continuous improvement and stronger systems.

Unlock the PagerDuty Operations Cloud

With a robust security ecosystem across endpoint security, threat intelligence, compliance and more, organizations can continuously evolve to address modern threat landscapes.

As organizations move to the cloud and strive to deliver customer value quickly at scale, they face a new set of security challenges. Our partnership with PagerDuty enables DevOps and security teams to automatically create and resolve PagerDuty security incidents based on Wiz Issues.
